Medical Industry

Medical applications often require the highest level of cleanliness, whether it is a clean room or an operating room. FabricAir dispersion systems are a great solution because of the anti-microbial fabric option, the washability of the ducts, general benefits such as no condensation and no drafts, and because our recommended fabric for Medical applications are compatible with common clean room standards.

Benefits

- ✓ [Noiseless](#)

“

In the medical industry there are many standards you have to fulfill in order to make production. One of the most important standard is Cleanroom Class 100,000. In order to achieve this standard in our production facility we need to have even and effective air distribution in production areas. After examining the FabricAir product line we decided to use the FabricAir Air Dispersion System as we realized that it was the most effective and feasible solution for our demands.

Type 8 / Type 8 AIO

Type 8 H-rail suspension is a method of suspending FabricAir ducts. The H-rail, so named because it looks like an H in the cross section, is made out of anodized aluminum, making it an excellent choice for corrosive environments.
