

# Anti-microbial

## Anti-microbial

FabricAir ducts are available with an anti-microbial coating that meets Oeko-Tex standards. Bacterial contamination is inherent to some applications, such as food processing. In these cases there is a strong emphasis on following best practices to manage microbial risks. FabricAir anti-microbial coated ducts are an excellent example of best practice. It is a great way to reduce the risk of bacterial growth on your air distribution system. The anti-microbial coating we apply is excellent at preventing the growth of *Apergilus Niger*, more commonly known as black mold, along with many other micro-organisms that are similar in nature.

Our anti-microbial coating lives up to Oeko-Tex requirements for environmentally friendly manufacturing procedures.
