

Unforeseen installation challenges called for a quick solution

Unforeseen installation challenges called for a quick solution

*When **DISH** met unforeseen installation challenges during the construction of Taastrup Svømmehal (a natatorium in Denmark), FabricAir was selected to supply replacement ducts due to our short lead time.*

We delivered a solution consisting of two white Ø1400 ducts in Combi 80 fabric, with double H-rail anti-corrosive stainless steel suspension and a combination of 360° MicroFlow™ and FabFlow™ for even, draft-free air dispersion.

The combination of flow models ensures efficient dispersion of fresh air to feather the evaporating chlorine gasses, which is important to create a healthy indoor climate for occupants in the pool area.

The result is stunning, see for yourselves.
